

Facts on Commitment

GREENPOINT BROOKLYN REMEDIATION PROJECT

Committed to Progress Everyday

ExxonMobil will be in Greenpoint until the job is done...and done right.

ExxonMobil has deployed substantial resources and has made significant progress in meeting the goals for its remediation program in Greenpoint. ExxonMobil is committed to completing the cleanup in compliance with the consent orders signed with the state of New York and the city of New York.

The ExxonMobil team dedicated to this program currently consists of a core group of approximately 30 staff specialists and partner-consultants, supplemented by approximately 18 subcontractors providing support services. The size of the team has grown substantially at various times to support project operations and expansion—it is expected to reach more than 100 workers during 2007 as new recovery wells are implemented. Project team members are all highly qualified and experienced. The current core team averages more than 15 years of experience in remediation and project management.

ExxonMobil continually seeks ways to enhance the effectiveness of its remediation activities by:

- using the best available technologies
- maintaining optimal recovery rates throughout the entire system, and
- expanding the system to accelerate recovery as feasible

Going forward, the health, safety and welfare of those living and working in the Greenpoint community will continue to be ExxonMobil's highest priority.

When will the job be done?

Complex recovery projects such as Greenpoint take time to complete. The size and location of the plume, as well as geologic and hydro-geologic factors, are what determines the time necessary to complete any remediation project. Significant progress has been made and ExxonMobil will be in Greenpoint until the remediation is complete.
